An aerosol includes both the particles and the suspending gas, which is usually air. Frederick G. Donnan presumably first used the term aerosol during World War I to describe an aero-solution, clouds of microscopic particles in air. This term developed analogously to the term hydrosol, a colloid system with ... Nanoparticles are typically hydrocarbons or sulfate and form by nucleation during dilution and cooling of the exhaust,

while accumulation mode particles are mainly carbonaceous soot agglomerates formed directly by combustion.
