

albatrosses and petrels across the world procellariidae

Mon, 10 Dec 2018 13:33:00

GMT albatrosses and petrels across the pdf - Albatrosses, of the biological family Diomedidae, are large seabirds related to the procellariids, storm petrels, and diving petrels in the order Procellariiformes (the tubenoses). They range widely in the Southern Ocean and the North Pacific. They are absent from the North Atlantic, although fossil remains show they once occurred there and occasional vagrants are found.

Albatross - Wikipedia - The European storm petrel, British storm petrel or just storm petrel (*Hydrobates pelagicus*) is a seabird in the northern storm petrel family, Hydrobatidae. It is the only member of the genus *Hydrobates*. The small, square-tailed bird is entirely black except for a broad white rump and a white band on the underwings, and it has a fluttering, bat-like flight. European storm petrel - Wikipedia -
